

INTERACTIVE DISPENSE DENOMINATION ADJUSTMENT

ABSTRACT OF THE DISCLOSURE

A system and method and programmed product interactively monitors the amount of cash present in a teller cash drawer while
5 reducing the data input requirements of the teller. It allows a teller to comply with a consumers request for specific denominations while at the same time minimizing premature depletion of specific denominations of money. It corrects situations where a denomination is not an integral multiple of
10 the next lower denomination thereby allowing a mix to be determined even when a lower denomination is depleted. The system and method including a programmed computer process presents a miscellaneous dialog field to a teller for handling commemorative and unusual denominations and the method allows
15 dispensing from this amount as well as from the usual denominations.
